:)	Urgent	Not Urgent
Important	• Pull menu from Purdue Dining API • Accept user's calories/protein • Filter food by dietary restrictions (prolly veg v non veg) • Print meal plan + servings	• Saving daily/weekly nutrition • Let users favorite what meal they like the most so we can prio that • Track what user has eaten
Not Important	• Make HTTP requests • Test our logic using test cases Junit • Parse JSON	• A good interface • When to eat your meal • AI meal descriptions
